

Step 1

Disconnect straps, roll up, and place in the Muscle Wall storage tote that they arrived in. Remove and dispose of the liner. Properly dispose of any contaminated sand and/or sand bags.

Step 2

Empty the Muscle Wall by using the bung wrench to unscrew the bung plugs on the backside of each wall. Place bung plugs in a secure location where they won't be lost or broken. A trash pump can also be used to pump the water out of the walls.

Step 3

Disconnect each Muscle Wall. One person on each side lifts the wall up until the wall is free of its connection.

Step 4

Stack the walls together in the same fashion as they were shipped. Turn one of the walls upside down and lay it on another wall ensuring that the pegs on top of each Muscle Wall are secured into the holes on the toe of the other wall.

Step 5

Stack the Muscle Wall back on their original pallets in the same fashion as they were shipped. Ensure that all of the male ends of the walls are on the same side. Run a safety strap all the way around the bundle securing it to the pallet. Transport to storage location.
